

These nets are made from PE yarns. They are UV stabilised and can last for several years on sun.

Nets are suitable for:

- shading greenhouses
- protection of fruits and vegetables from birds and insects
- other needs of gardeners and farmers
- olive picking
- protection on building scaffolds
- protection on sport fields
- shading balconies or parking places

The advantages of nets are:

- optimal ventilation and shading
- small weight of nets eases their application

Nets can be made in three different weights with different level of shading.

Dimensions, colour and weight of net can adjust on customer request.
